Toolbox Talk Training: Ladder Safety – More Accident Prevention Tips When Working On Extension Ladders

This toolbox talk reviews additional ladder safety points for portable extension ladders. Fall hazards are present whenever a ladder is used. Follow the manufacturer's instructions and labels, your employer's rules, and the OSHA requirements below.

Use the right ladder for the job

Do not place a ladder on boxes, barrels, or other unstable bases to gain extra height (29 CFR 1910.23(c)(13)). Do not tie or fasten ladders together to make a longer ladder unless they are specifically designed for that use (1910.23(c)(12); 1926.1053(a)(7)). If the ladder is not tall enough for the job, stop and get a ladder of the right size.

Use the ladder for its designed purpose

Ladders must be used only for the purposes for which they were designed (1910.23(b)(8); 1926.1053(b)(4)). Do not lay a ladder flat to use as a platform, plank, or walkway unless it is designed for that purpose.

Face the ladder when climbing

Face the ladder when climbing up or down it (1910.23(b)(11); 1926.1053(b)(20)). Do not carry any object or load that could cause you to lose balance and fall while climbing (1910.23(b)(13); 1926.1053(b)(22)).

Consider whether a ladder is the right equipment

A ladder is not the right equipment for every job. If the task needs a stable work platform, ask your supervisor about scaffolding, an aerial lift, or other equipment designed and rated for the task.
